2012-2016 Fiat 500 "Biposto" Style Custom Door Pull Installation Instructions

<u>Tools Needed:</u> 5 mm Hex Wrench (Allen Wrench)
Small Flathead Screwdriver
Drill with ¼" or 6.5mm Drill Bit

<u>Parts Included:</u> Nylon Door Pull, Longer Hex Head Cap Screw, Stainless Steel Washer, Plastic Washer, Plastic Spacer

- Using the small screwdriver carefully pop off the Door Screw Cover located inside of the door panel armrest by inserting in the top seam and gently prying open.

- Using the 5mm hex wrench, remove the rear (towards rear of the car) screw (not needed for this install but save for future)

- Using the provided template for left (Driver's) or Right (Passenger's) door, drill a ¼" hole in the removed Door Screw Cover. (**Notes:** The hole will be towards the rear of the cover, or towards the rear of the car. Use an awl or sharp nail to make a small indent in the center of the hole before drilling for a more accurate hole location.)

Modified Door Screw Cover should look like this after drilling hole. (Drivers side, left, shown above)

- Assemble the new longer Bolt, Door Pull and hardware, along with the modified Screw Door Cover as shown below:

- Assemble the set onto the new longer Screw in the following order: Stainless Steel Washer, Door Pull Strap, Plastic Nylon Washer, Modified Door Screw Cover, and finally the Plastic Nylon ½"spacer.

- Carefully snap the Screw Door Cover back in place, placing the bottom tabs in first and then snapping in the top. Do this slowly while tilting the cover backwards slightly to keep the white Plastic Spacer in place on the screw.

- After the Screw Door cover is snapped in place, start screwing the new longer screw in by hand until you feel it screwing into the hole and continue turning a few turns by hand. Then tighten using the 5 mm Hex Wrench. **Do not over tighten**
