

Please view the following steps below:

Download the following software.

VirtualBox - www.virtualbox.org/wiki/Downloads (Click on the AMD64 link for OS X)
VirtualBox 5.0.14 Oracle VM VirtualBox Extension Pack

Windows 7 - dev.windows.com/en-us/microsoft-edge/tools/vms/mac/
(Select IE11 on Win7 and then select VirtualBox)

Euro+Drive Install Guide - eurocompulsion.net/EURODRIVEABARTH500TINSTALL.zip

Install VirtualBox – Refer to the user manual for VirtualBox on how to install this software.
If you don't know how to install software on a Mac, you might have bigger issues at hand.

Unzip the Windows 7 VM.
Open VirtualBox.

Double-click on VirtualBox 5.0.14 Oracle VM VirtualBox Extension Pack and install the
Extension pack.

Hit \boxtimes + I to import the VM into VirtualBox. Accept the default values for the VM settings.

Click on the VM and then hit settings. Click on ports and then enable USB controller.

Select USB 2.0 (EHCI) Controller.

Start the VM.

Once booted into Windows, Click on Devices and then Insert Guess Additions CD image...
on the menu bar for VirtualBox

Click on the Windows icon on the bottom left corner and then click on Computer in Windows.

Double-click on the D: drive.

Hit Yes on the UAC prompt and then follow the prompts on the software setup.
It will ask you to reboot, go ahead and do so.

Start the VM and follow the steps to installing the DimSport software.
Plug in your DimSport USB flash tool and then go to Devices->USB-> DimSport MyGenius
Device to have your Windows 7 VM see the device.

Proceed as normal as-per EuroCompulsion's guide.
