

Thank you for purchasing this K/N Drop In Filter Upgrade! K&N's replacement air filter for the Fiat 124 Spider is designed to increase horsepower and acceleration while providing excellent filtration. These filters are washable and reusable and are custom designed to fit into the existing Fiat factory.

Installation is simple, please follow these instructions.

TOOLS NEEDED:

-Flat head screw driver

INSTALLATION:

1. Locate and release metal clips (2) on factory airbox.

2. Locate evap fittings (2) on airbox. Use a flat head screwdriver to push the clips upward to release connection to airbox fittings.

3. Disconnect evap hoses from airbox.

4. Pull airbox up from left side. Note the angled holders on right side of airbox. Pulling the box up from the left will angle the holders and allow you to disconnect the lid.

5. Push airbox lid over to the side. The intake hose is flexible and rubber, so you will not have to disconnect the intake hose from the turbo and airbox.

6. Remove the factory panel air filter. Use flat head if necessary.

7. Replace with K/N high flow drop in filter.

8. Repeat steps 1-5 in reverse order to put airbox lid back in place.

CONGRATULATIONS! You have completed this installation!
